The STERILIZATION TOWER is designed to be placed at the entrance of buildings like offices, factories, shopping malls, metro stations and other similar places.

The tower is designed keeping in mind common personal protection requirements of an individual. It serves as a multipurpose tower that can be used to sanitize hands, dispense masks, measure body temperature, sterilize the personal belongings (car keys, mobile phones etc.) and discard the used face masks safely.

The design is entirely modular and can be scaled up or down depending on the number of people expected to use the facility in one given time.
